

Practical-4.1

AIM:Using Angular JS, user get input value search box and enter it in AngularJS component using Enter key

Code:

```
<!DOCTYPE html>
<html>
<head>
  <title>AngularJS Search</title>
  <script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"></scr
ipt>
</head>

<body ng-app="myApp" ng-controller="SearchController">

  <h2>Search Example</h2>

  <form ng-submit="search(searchText)">
    <input type="text"
      ng-model="searchText"
      placeholder="Enter search text">

    <button type="submit">Search</button>
  </form>

  <h3>Output:</h3>

  <p ng-if="result">
    You searched for: <strong>{{ result }}</strong>
  </p>

  <script>
    var app = angular.module("myApp", []);

    app.controller("SearchController", function($scope) {
```

```
    $scope.search = function(value) {  
        $scope.result = value;  
        console.log("Search value:", value);  
    };  
  
    });  
</script>  
  
</body>  
</html>
```

Output:

Search Example

Output:

You searched for: **angular js**

AIM:Using AngularJS features make a shopping list/To-do list where you can add or remove Items.

Code:

```
<!DOCTYPE html>
<html>
<head>
  <title>AngularJS Shopping List</title>

  <!-- AngularJS Library -->
  <script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.mi
n.js"></script>

  <style>
    body {
      font-family: Arial, sans-serif;
      margin: 40px;
    }

    .container {
      width: 400px;
      margin: auto;
    }

    input {
      padding: 10px;
      width: 250px;
    }

    button {
      padding: 10px;
      cursor: pointer;
    }
  </style>
</head>
<body>
  <div class="container">
    <input type="text"/>
    <button>Add Item</button>
  </div>
</body>
</html>
```

```
ul {
  padding: 0;
}

li {
  list-style: none;
  margin: 8px 0;
  padding: 10px;
  background: #f2f2f2;
}

.remove {
  float: right;
  background: red;
  color: white;
  border: none;
  padding: 5px 10px;
}
</style>
</head>

<body ng-app="shoppingApp" ng-controller="ShoppingController">

  <div class="container">

    <h2>Shopping / To-Do List</h2>

    <!-- Add Item -->
    <form ng-submit="addItem()">
      <input type="text"
        ng-model="newItem"
        placeholder="Enter item">

      <button type="submit">Add</button>
```

```
</form>

<h3>My List</h3>

<!-- Display Items -->
<ul>
  <li ng-repeat="item in items">
    {{ item }}

    <button class="remove"
      ng-click="removeItem($index)">
      Remove
    </button>
  </li>
</ul>

<p ng-if="items.length === 0">
  No items in the list.
</p>

</div>

<script>
  var app = angular.module("shoppingApp", []);

  app.controller("ShoppingController", function($scope) {

    // Initial items
    $scope.items = [
      "Milk",
      "Bread",
      "Eggs"
    ];

    // Add item
```

```
$scope.addItem = function() {  
  
    if ($scope.newItem) {  
        $scope.items.push($scope.newItem);  
  
        // Clear input box  
        $scope.newItem = "";  
    }  
};  
  
// Remove item  
$scope.removeItem = function(index) {  
    $scope.items.splice(index, 1);  
};  
  
});  
</script>  
  
</body>  
</html>
```

Output:

Shopping / To-Do List

Enter item	Add
---	------------------------------------

My List

Milk	Remove
Bread	Remove
Eggs	Remove
